

## EBEZ® Feed Through Puck

Titan Division | Instruments

The Hunting EBEZ® Feed Through Puck (EBEZ) is a spring-loaded conductor contact installed inside the end fitting of wireline perforating guns. EBEZ simplifies the wiring process for selective fire perforating guns by eliminating the wire connection between each gun and the tandem sub above. The electrical connection is made by screwing the two assemblies together, saving assembly time and reducing wiring errors.

**Reduces amount of wiring required in the field.**

**Reduces service quality failures.**
