

Portable Hose Extension Modules

These compact modules are intended to provide storage of hoses used with small control units (units which do not include integral wet centre hose reels). They can be used with any HESWI wet centre hose reel and can include up to four wet centre hose reels arranged side by side.

The standard unit includes a single wet centre hose reel mounted in an all welded, stainless steel frame.

The frame includes lifting points and labeled connections mounted on a stab plate for connection of the module to the control unit via a suitable hose.

Refer to accessories section for hose details.

The wet centre hose reels are provided with manual rewind mechanisms which are operated by a simple crank handle.

Standard Specifications:

- All welded, stainless steel frame
- Single wet centre reel c/w bevel gear drive
- Labeled connection mounted on stab plate
- Certified lifting points
- Only quality, branded components used in assembly of unit

Options:

- Various hose specifications are available for use with this unit, the hoses can be supplied with various fittings - refer to accessories section for details
- Various types of wet centre hose reel
- Up to four wet centre hose reels arranged side by side
- Certified lifting assembly (sling set and shackles)
