

Entry Guide

Pressure Control Equipment

Features

- Large entry guide funnel
- Aluminium construction to reduce weight for easier handling
- Many adapt to the In-Situ Test Sub for added time savings

Benefits

- Easy to install and remove
- Can reduce Cable Head / Rope Socket catch entering PCE string
- Reduces risk of dropped objects and injury
- Reduces rig up time

The Hunting PCE Entry Guide is designed to eliminate sharp edges when entering the PCE string with a wireline conveyed tool string, reducing or eliminating the chances of a surface pull-off at the Cable Head/Rope Socket.

Manufactured from a rugged aluminium, the Entry Guide is light weight for improved handling, easy to install or remove and most sizes offer handles as standard kit.

To save more time during rig up or between runs, some Guides adapt directly to the In-Situ Test sub, allowing a rapid pressure test of the reconnected PCE String before running the tool string.
