

Ezi-Control Unit

Pressure Control Equipment | Hydraulic Control Unit

Features

- Ability to function and control:
 - Pressure Control Head (PCH) - Type-2 or Type-3
 - Tool Trap (Dual and single action hydraulics) and Ezi-close triple WLV
 - Ezi-Latch remote wellhead connector (with Insitu/Quick Test function)
- Comes with 2 hose reel banks:
 - Bank 1: 260ft hose lengths to function the hydraulics and grease to the PCH, lube lines and vent line.
 - Bank 2: 200ft hose lengths to function hydraulics and test lines for Tool Trap, WLV and Ezi-Latch
- Designed to control PCE up to working pressures up to 15,000 PSI
- Hydraulic pressure is designed to function at 2700 PSI provided from integral pumps and accumulators.
- Easy deployment of hoses with the use of a hydraulic rotary pump
- Compact footprint, full system consisting of 3 units all complete with forklift pockets to move around rig site

Benefits

- Centralizes the pressure control, streamlines rig-up, operations, and rig down
- Reduces personnel numbers at the well site
- Improves safety with less tripping hazards
- Reduces damage to costly hoses and potential of operational downtime
- Back-up handpumps and accumulators built in for redundancy
- Maintenance and service friendly

The Hunting Ezi-Control Unit (Grease, Hydraulic and Ezi-Latch) is designed to function the full suite of Pressure Control Equipment (PCE) at a typical North American well site. Using the same philosophy as other products in our 'Ezi' range, the Ezi-Control Unit control unit is simple, robust, and cost effective. It effectively streamlines the well site operation, while making rig-up/rig-down vastly more efficient with the twin hose reel system.

The system centralizes and streamlines deployment and control of a modern pressure control rig-up.
