

Solid Wire Finder

Slickline Downhole Tools

Features

- Solid body

Benefits

- Can be used in different sized tubing
- Improves successful wire recovery operations

The Hunting Solid Wire Finder is designed to locate and ball the upper end of the broken cable in the wellbore during fishing operations. The wire can then be engaged by a wireline grab and retrieved.

The wire finder is deployed into the well attached to a light fishing tool string with a dummy rope socket and jar up to shear pulling tool.

Once the wire finder has located the end of the broken wire and a weight loss is observed, jarring down for a minimal distance will ball the broken wire in the wellbore.

Hunting Solid Wire Finders are available in all common industry toolstring sizes and are manufactured with either sucker rod or in connections as per customer requirements
