

Wireline Jar - Spring

The Hunting Spring Jar is designed to impact a very high impact load to a tool string without excessive jarring action. With a reasonably short tool string, an upward pull on the wireline compresses the jar spring until such time as the inner ring has moved up enough to allow the balls to move in from the external ring allowing the jar to 'fire'.

Once released, the jar rod moves up at a rapid rate, using all of the stored energy from the pre determined loading on the wire, the stretch in the wireline and the mass of the stem bar to provide a high impact.

Once released, the jar rod moves up at a rapid rate, using all of the stored energy from the pre determined loading on the wire, the stretch in the wireline and the mass of the stem bar to provide a high impact.

WIRELINE JAR - SPRING				
Nominal Size	Fishing Neck	Setting Range	Top and Bottom Threads	Part Number
1.875"	1.750"	400# & 700# Spring	1 1/16-10	372-1875-000
1.875"	1.750"	400# & 700# Spring	1-7/8 Petrolin QLS	QLS-372-1875-001-2-2
1.875"	1.750"	400# & 700# Spring	1-7/8 Halliburton HQC	372-1875-001HQC
