

Conventional Tubing Broaches

Slickline Downhole Tools

Features

- Robust design
- Hardened and tempered cutting faces

Benefits

- Designed for more difficult scale and debris removal

Hunting Conventional Diamond Backed Broaches are heavy duty tools with hardened and tempered cutting mandrels, designed to broach out tubing restrictions in the well bore. Depending on the type of material on the tubing well, cutting ability will vary.

Broaching tools are usually supplied with a set of cutting mandrels, sized from the restricted ID to the required ID.

A conventional diamond backed broach comprises of a solid bar inner mandrel complete with center bore and lateral ports for fluid by-pass, a bottom sub and a diamond cut broaching mandrel.

The tools are available with customer specified connections and fish neck.
