

Junk Catchers

Slickline Downhole Tools

Features

- Different ODs available to fit customer requirement
- Catcher basket lengths vary by requirement
- Easy recovery with a GS Pulling tool
- Standard and corrosion resistant materials
- With or without bottom connection to set in conjunction with a prong

Benefits

- Easy to place at depth and recover
- Captures debris which might settle on plugs below

Hunting's Junk Catchers provide an easy and economical method to protect retrievable plugs and other downhole equipment from debris settling when performing remediation above. The Junk Catcher can be supplied with a standard quick connection or sucker rod connection below to accommodate an equalizing prong for added protection when recovering flow control.

When ready to recover, a standard GS pulling tool can be used, reducing the need for special equipment.
