

Roller Bullnose VariBall™

Slickline Tools

Features

- Bottom of tool string guide roller
- Integral swivel
- Multiple size roller options
- Self-aligning Rollers

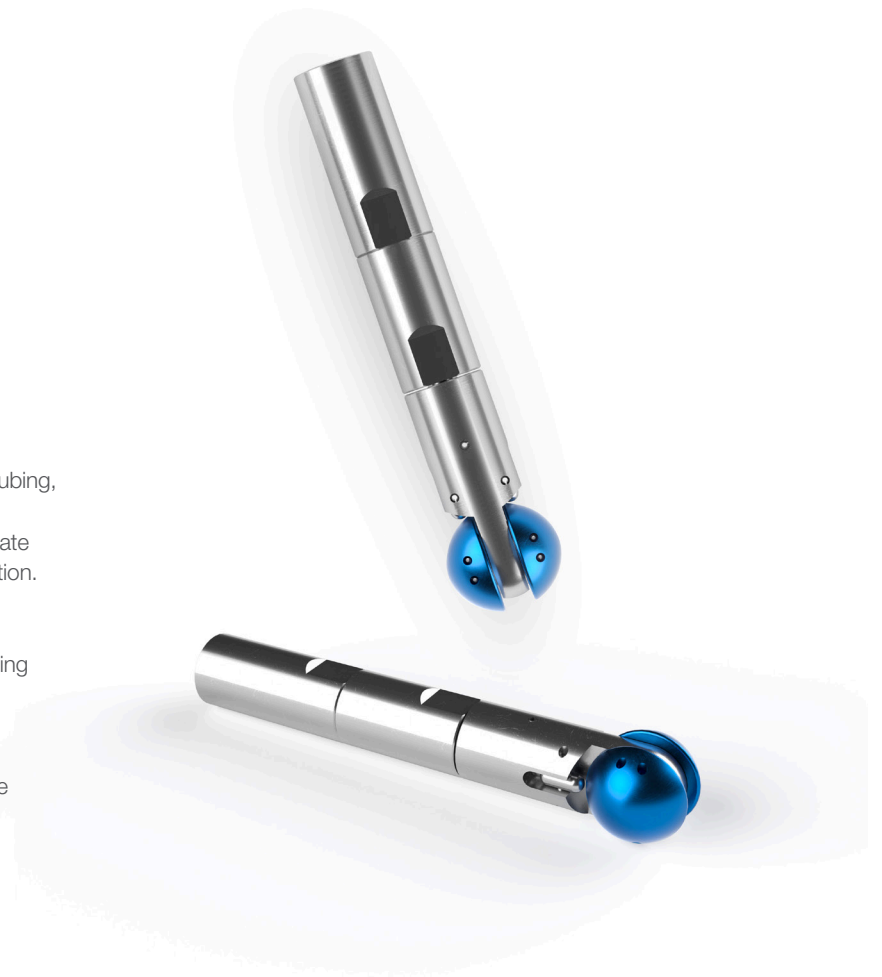

Benefits

- Improves well bore accessibility in deviated wells
- Maximizes tool string lift in tubing

Hunting's Roller Bullnose VariBall provides tool string lift from the tubing, minimizes tool string drag, and improves well bore accessibility in deviated wells, especially where longer bottom-only tools may create drag, reducing run in hole speed and achievable depth due to friction.

Offered with 1-3/16" 12 thread or 1-3/8" 12 thread adapters as standard, other adaptations are quick and convenient with a Hunting crossover adapting to most any E-Line or Slickline connection.

The Roller Bullnose accepts a range of easy to change roller sizes to best fit the tool string requirements. An integral swivel allows the elliptical rollers to self-align throughout the run.
